

**KTH Engineering Sciences**

Dept. of Applied Physics

## **Applied Physics seminar instructions**

Most welcome as a speaker in the Applied Physics seminar series at KTH in AlbaNova!

The Applied Physics seminar series is targeted to a general physics audience consisting of faculty members, researchers and PhD students at the department of Applied Physics and neighbouring departments at AlbaNova. The general aim of the seminar series is to update the audience about new interesting developments and achievements in relevant research areas. A specific purpose is to stimulate collaboration and interaction, both within and outside the department and also to broaden the knowledge of people who are not experts in the specific field. *To fulfill the purpose of the seminars the presentations should to a considerable part consist of more general overview material, easily accessible for everyone in the audience.*

The normal time frame for the seminars is 9:15 – 10:00 (coffee is served from 09:00). Each seminar starts with a few minutes of general information from the head of department. Then the speaker (You) is introduced by the person responsible for the invitation. This leaves a total of 40 minutes for the actual talk, optimally with about 35 minutes of presentation and 5 minutes for discussion.

We look forward to having you here.
